    There are so many chat programs for unix it would be so easy to do.
    You can even write your own in shell which has been done already
    its not that hard. I bet you can make a shell program look just
    like the nos converse node will a little effort.

    It can be done trust me :-).

There are two sites that carry TheNet code:

ucsd.edu
tomcat.gsfc.nasa.gov

The latest TheNet Plus is 2.10st and TheNet X1H is listed. TheNet X series
contains an IP Router and also requires a 27C512 EPROM. Bank switch inst-
ructions are in the ZIP file.
